Government organizations spend enormous amounts of money. They employ a large percentage of the work force. They have an overwhelming impact on the national economy and wealth. They buy, for the most part, unsecured. Most power for management is a combination of oversight and audit. Oversight is primarily reactive offering negative feedback for failure and demanding additional rules and regulations to prevent reoccurrences. Audit has its "bright line" discrepancies and clear relationships to these regulations. Government operations are often critical for "auditors" and their relationships. Government audits are often cited for "auditors" and their relationships. Government audits are often cited for their ability to offer insights into the nature of management controls. In the context of government programs, oversight can be described as "management". Government oversight can be described as "management". This book provides an extensive overview of China’s Management Controls System (CMS), examining the development of theory and practice and providing a framework that integrates China’s unique enterprise structures, corporate culture and managerial mindset into management control systems. The work offers a novel look into the development of China’s management controls and insightful perspectives on the relationship between management controls and organizational culture. The book is organized into 12 chapters with the following topics: (1) China’s management control systems, (2) the role of management control in various different types of enterprises, (3) the role of government and bank credit in management control systems, (4) the role of enterprise management control, and (5) the role of management control in various different types of enterprises. The book is written for students and professionals in the field of management control systems, as well as those with an interest in the development and implementation of management control systems.
